# Castle calculations

Use division facts for the 5 times table

You will need:

- 0–50 number line

10 flags shared between 5 turrets:

$$\square \div \square = \square$$

25 flags shared between 5 turrets:

$$\square \div \square = \square$$

15 flags shared between 5 turrets:

$$\square \div \square = \square$$

30 flags shared between 5 turrets:

$$\square \div \square = \square$$

45 flags shared between 5 turrets:

$$\square \div \square = \square$$

## Teacher's notes

Children work out how many flags will be on each castle turret, using the number line to find the answer to each division problem.
