Candle calculations

Use doubles to work out other addition facts

The image contains several party hats with addition problems: $1 + 2$, $2 + 3$, $3 + 4$, $4 + 5$, and $5 + 6$. Below them are five children with their own addition problems: $3 + 3 + 1$, $2 + 2 + 1$, $4 + 4 + 1$, $1 + 1 + 1$, and $5 + 5 + 1$. At the bottom are five cakes with different numbers of candles: 10, 8, 4, 6, and 10. Dotted lines connect the hats to the children, and the children to the cakes.

Teacher's notes

Children work out the addition calculation, on each party hat. They draw a line to join it to the character with the matching calculation then to the cake showing the correct number of candles. They write their answer on the cake.
