What to do

- Ask your child to cut the trolls from the sheet and arrange them into matching number pairs.
- They look at each pair in turn, and match them to the troll cave showing their answer. For example, the two number '5' trolls will match the '10' cave.
- They glue the trolls into place either side of the troll cave and complete the addition double calculation underneath, e.g. $5 + 5 = 10$.

On the back of this sheet, help your child to find addition doubles for other even numbers up to 20, e.g. double 2 is 4, double 4 is 8, etc. Write these down as addition calculations, for example, $2 + 2 = 4$, $4 + 4 = 8$, etc.
